

Requirements Testing For Software Engineering Project

The 4 use cases we included in our original use case diagram were:

Login/Register feature

- ☐ ~~User arrives at home page~~
- ☐ ~~Option to Register or Login~~
- ☐ ~~User has to create account if one doesn't exist to be allowed to purchase~~
- ☐ When user decides to register, they need to answer a security question

Search Bar Feature

- ☐ ~~The search functionality should be integrated with the MySQL database enabling efficient retrieval of relevant bookings~~
- ☐ Users should be able to apply filters to their searches, so the booking process is as user friendly and easy as possible

Booking Feature

- ☐ ~~Website should collect all the given information in the details form~~
- ☐ ~~Booked trips should appear on the user's profile allowing them to cancel/add on extras to their trip.~~

Searching for flights feature

- ☐ ~~Search bar will allow to search by country/package for trips~~
- ☐ ~~Once the user selects a trip, they will be redirected to a details page~~
- ☐ ~~The user will have to enter their details and how many bags + people.~~
- ☐ The user will also have the choice to add on a shuttle to their hotel for an extra fee.

☐ ~~Once the user enters their details, they will be redirected to a payment page~~

☐ Once payment is completed, user gets confirmation email.
